CAREER OBJECTIVE

Computer Science and Engineering graduate with practical experience in Python, SQL, machine learning, and web application development. Seeking an entry-level software engineering role to apply programming, object-oriented design, problem-solving, and database management skills while building reliable software solutions.

QUALIFICATION

Bachelor of Technology (Computer Science and Engineering) 2022 – 2026
St. Mary's Women's Engineering College, 7.29 CGPA

TRAINING EXPERIENCE

Python Full Stack Trainee 05/2026 – Present
Codegnan

- Strengthening Python programming, OOP concepts, and problem-solving skills through hands-on practice.
- Learning front-end development using HTML, CSS, JavaScript, and Bootstrap.
- Practicing SQL queries, joins, and relational database operations using MySQL.
- Currently completing Flask training to develop Python-based web applications and integrate databases.
- Practicing Data Structures and Algorithms to improve logical thinking and coding efficiency.

INTERNSHIP

Full Stack Development (MERN) Internship – Blackbucks 05/2025 – 07/2025

- Developed full-stack web applications using React, Node.js, JavaScript, and MongoDB.
- Implemented front-end components and supported back-end application development using Node.js.
- Practiced version control and deployment tools such as Git.

Web Development Internship – Plasmid 08/2025 – 09/2025

- Developed responsive web pages using modern JavaScript technologies.
- Applied web development concepts to build and enhance user-facing web interfaces.
- Gained hands-on experience in web application development and front-end implementation.

EXPERTISE

Programming Languages: Python, C
Core Concepts: OOP, Data Structures and Algorithms
Front-End: HTML, CSS, JavaScript, Bootstrap, React.js
Back-End: Flask, FastAPI, REST APIs
Database: MySQL, MongoDB
Tools: Git, GitHub, VS Code, Jupyter Notebook, MySQL Workbench, Render, Vercel

PROJECTS

Malicious AD Network Detection (ML, Python, Flask, Scikit-learn, Pandas, HTML, CSS, Joblib) [Live Demo]

- Developed a Python and Flask-based web application to classify URLs as safe or malicious using machine learning.
- Trained a Random Forest classifier on a dataset of **thousands of URLs**, achieving high accuracy and precision in malicious URL detection.
- Reduced false positives through optimized feature extraction and model tuning.
- Integrated the trained model with the Flask backend for real-time prediction.
- Deployed the project on Render, gaining practical experience in debugging and application hosting.

AI-Powered Farmer Assistant (ML, Python, FastAPI, React, TensorFlow, Scikit-learn, MongoDB) [Live Demo]

- Developed a full-stack AI-powered agricultural platform with crop recommendations, disease detection, weather alerts, and real-time market prices.
- Trained a Random Forest model for crop recommendation, integrated via REST endpoints.
- Built **8+ modular REST APIs** for ML inference, external API integration, and MongoDB persistence.
- Reduced manual crop advisory effort through automated ML-based recommendations.
- Deployed the project on Render, gaining practical experience in debugging and application hosting.

MoneyMate – Personal Finance Tracker (React 19, Vite 8, React Router v7, Bootstrap 5, Context API, LocalStorage) [Live Demo]

- Built a full-featured expense tracker with React 19, Vite, and Bootstrap 5.
- Improved application load time using code splitting and lazy loading.
- Reduced unnecessary re-renders through optimized state management with Context API.
- Implemented user authentication with per-user data isolation and localStorage persistence.
- Deployed on Vercel with responsive design (mobile to 4K).

CERTIFICATION

- Codegnan – Certificate of Python Module Completion
- Infosys Springboard – Python Fundamentals Part 1 and 2
- NPTEL – The Joy of Computing Using Python
- Deloitte (Forage) – Cyber Job Simulation
- Blackbucks – MERN Full Stack Web Development

STRENGTHS

- Problem Solving
- Analytical Thinking
- Time Management
